

HT-Air® 2300

Designed for both efficiency and cost-effectiveness, HoverTech's HT-Air 2300 air supply offers six airflow options in one convenient piece of equipment. The HT-Air allows you to safely transfer, lift and position patients with the addition of a variable speed option that offers four slower speeds for use with the positioning devices. This variable speed function may also be used with the HoverMatt to provide a quieter and slower inflation for patients who are anxious.

HT-Air® 2300 Benefits:

- Variable speed inflation with six airflow options means only one device is needed to inflate all HoverMatt and HoverJack models, as well as HoverTech's positioning devices
- Patented handle design combines handgrip and hanger in one
- Flexible connection between the hanger and the body of the air supply prevents damage to furnishings and equipment
- Expandable hose snaps into a built-in channel with attached fluid prevention cover to stay out of the way
- Model Number: HTAIR2300 (230V)
